

Commercial Landscape Design Services

Our office is uniquely qualified to assist you with design solutions for light commercial properties that require a slightly higher level of detail. Professional buildings, retail developments, restaurants, medical facilities, multifamily housing units and the like can all benefit from a quality Landscape Plan. Working with property owners, managers, developers, Architects and Civil Engineers we are able to enhance a properties exterior and help bring it to its fullest potential. The training of a Landscape Architect is an often overlooked blend of Civil Engineering and the more familiar practice of Architecture. While we do not have the specific knowledge of either of these disciplines it is that gray area between the two that can really assist in a successful project. In our current environment with so much emphasis on the environmental impact of any project the knowledge of Landscape Architecture profession can no longer be overlooked.

With the criteria established by the LEEDS and LID programming our approach to designing projects is with an eye on preserving and/or maintaining as many of the sites existing amenities' as possible. The development of a site should use these guiding principles to reduce the impact on the larger environment. Issues including wildlife habitat, ground water quality and quantity and the humans that will use the space can all be accommodated. Too often we see the "detailing" of the outdoors subject to value engineering. This leaves all parties disillusioned, disappointed and too often with an expensive bill to repair and replace these amenities. The cost of building in today's environment has diminished the importance of how things look and perform today and in the future. It is prudent that this area of construction moves beyond the economics and address all of the issues in the beginning. With appropriate programming and budgets at the beginning of a project the end result can have tremendous impact on its overall success.

Visually appealing spaces that people can interact with one another in can create a sense of place and a sense of community. This requires a special set of skills that is unique to the profession of Landscape Architecture. We welcome the opportunity to discuss your project and would be glad to assist in providing appropriate planting plans, pavement detailing, retaining wall design, the design and specifying of site amenities' including signage, benches, receptacles, fencing, light standards and general site enhancements. Depending on the complexity of your project we can provide insight about unique, specific areas of concern as well as full service design. If your project requires the expertise of a Registered Landscape Architect we can also assist you with stamped drawings. Please consider contacting us to discuss how we might help you or your client bring their property to its fullest potential. We look forward to the opportunity to help you improve the places we live, work and play.
